Mrs. Angela Hawkins Director of Maintenance Wentzville R-IV School District 101 Support Service Drive O'Fallon, Missouri 63366

### Subject: Results of Drinking Water Testing for Lead Content

### Site(s): Admin Center 280 Interstate Drive Wentzville, MO 63385

Dear Mrs. Hawkins,

On the morning of December 14<sup>th</sup>, 2023, J.S. Held, LLC performed lead testing of multiple water sources at the Admin Center located at 280 Interstate Drive in Wentzville, Missouri. The sampling was performed by trained and licensed personnel in accordance with USEPA, HUD and State of Missouri Regulations and Guidelines. Work was performed in accordance with the newly amended Missouri Senate Bill 681.

All inspectors involved with sampling activities had EPA approved training in lead. Certifications for our firm and the inspector collecting the samples are included as Appendix C to this document.

All samples were collected on a "first draw" and "second draw" basis. "First draw" is achieved by allowing the water system to rest for at least eight hours prior to sampling in order to collect any existing debris or settlement within the sample. The intent of this sampling is to replicate "worst case scenario" conditions. J.S. Held proposes to collect a second sample from each source as a "follow-up sample" per the Missouri Senate Bill 681 requirements. As such, J.S. Held inspector met at the building at 5:30 a.m. to collect water samples before the systems were used by staff or students. The State of Missouri and other regulatory agencies recommend that water sources run for at least thirty seconds and as long as two minutes prior to use to avoid settling within the water system.

Drinking water samples were collected from Fifteen (15) different locations throughout Admin Center during the sampling event. The water samples were collected from drinking fountains and sinks potentially utilized for cooking or drinking activities at the campus. After sample collection, samples were immediately iced down and delivered to Teklab, Inc. located in Collinsville, Illinois following strict chain of custody procedures. Teklab is a NELAP accredited and State of Illinois licensed laboratory specializing in drinking water analysis. Detailed sampling locations and sample results are located in Appendix A of this report.

The analytical sensitivity utilized for the analysis of the water samples submitted identified a reporting limit (RL) of 1.0 micrograms per liter ( $\mu g/L$ ). The analytical sensitivity utilized for the analysis of the water samples submitted identified a reporting limit (RL) of 1.0 microgram of lead per liter ( $\mu$ g/L). This reporting value equates to 1.0 parts per billion (ppb) of lead. The USEPA action level for lead in drinking water is 15.0 ppb for PSW. The USEPA document titled "Lead in Drinking Water at Schools and Child Care Facilities" last updated November 9, 2015 identifies an action level for drinking water collected from a plumbing fixture as 20.0 ppb. Twenty-Seven (27) samples collected from the selected locations at the Admin Center reported sample results which were less than the action level. This information can be found under the National Primary Drinking Water Regulations provided by the EPA, CFR 2010 Title 40. (See Appendix A and B for Sample Results) The Missouri Senate Bill 1075 require potable plumbing fixtures to be less than 5.0 ppb, the levels area above 5 ppb, then action shall be necessary to filter the water from the fixture or clean/repair/replace the fixture and retest until the levels are reported below 5 ppb. Six (6) samples collected from the selected locations at the Admin Center reported a sample result which is above 5 ppb (See Appendix A and B for Sample Results)

### The following results are greater than the 5 ppb requirements under Senate Bill 681.

Sample ID 07A Room 251 – Sink	( <b>18.7</b> ppb)
Sample ID 12B Room 451 Near Room 453 – Sink	(6.1 ppb)
Sample ID 13A Room 451 Near Room 455 – Sink	(12.1 ppb)
Sample ID 14A Room 310 – Sink	(11.1 ppb)
Sample ID 15A Room 341 – Sink	( <b>8.3 ppb</b> )
Sample ID 16A Room 260 – Sink	( <b>30.8</b> ppb)

At this time all water sources testing at 5 ppb or above should be removed from service until filtration can be added or these sources are repaired/replaced and retested reporting under 5 ppb. These sources are subject to additional maintenance activities and response actions prior to use. Before being put back in service. In addition, all sources will be subject to an ongoing maintenance program and re-testing at appropriate intervals. The **district will be required to provide notification to parents and staff within 7 days of**  receiving these sample results and results shall be posted on the district website within 2 weeks. Any samples reported over 5 ppb should be re-sampled on an annual basis at a minimum.

J.S. Held recommends that all water sources run for at least thirty seconds prior to use as recommended by the USEPA.

J.S. Held is pleased to provide this information to Wentzville R-IV School District and we appreciate the opportunity to provide quality environmental consulting services. Please call us at (618) 343-3590 if you have any questions or to arrange a meeting to discuss.

Sincerely, J.S. Held, LLC

Jim Yasitis

Jim Yasitis Vice President of Environmental Health & Safety

### APPENDIX A SAMPLE LOCATIONS & RESULTS

### TABLE 1

### Drinking Water Sampling for Lead Content Wentzville R-IV School District Admin Center Building Sampled: December 14, 2023

Samp	ble ID Location	Water Source	Results (ppb)
01A	Room 125 – North Wall	Sink	3.2
01B	Room 125 – North Wall	Sink	<1.0
02A	Room 125 – South Wall	Sink	4.8
02B	Room 125 – South Wall	Sink	<1.0
03	Room 125	Ice Machine	<1.0
04A	Near Room 275	Fountain	<1.0
04B	Near Room 275	Fountain	<1.0
05A	Near Room 200 (Left)	Fountain	<1.0
05B	Near Room 200 (Left)	Fountain	<1.0
06A	Near Room 200 (Right)	Fountain	<1.0
06B	Near Room 200 (Right)	Fountain	<1.0
07A	Room 251	Sink	18.7
07B	Room 251	Sink	2.1
08A	Near Room 406 (Left) Non-Functional	Fountain	
08B	Near Room 406 (Left) Non-Functional	Fountain	
09A	Near Room 406 (Right)	Fountain	<1.0
09B	Near Room 406 (Right)	Fountain	<1.0
10A	Near Room 460	Fountain	1.3
10B	Near Room 460	Fountain	1.8
11A	Near Room 407	Sink	1.2
11B	Near Room 407	Sink	<1.0
12A	Room 451 Near Room 453	Sink	6.1
12B	Room 451 Near Room 453	Sink	1.6
<mark>13A</mark>	Room 451 Near Room 455	Sink	12.2
13B	Room 451 Near Room 455	Sink	3.5
<mark>14A</mark>	Room 310	Sink	11.1
14B	Room 310	Sink	1.2
15A	Room 341	Sink	<mark>8.3</mark>
15B	Room 341	Sink	1.6
16A	Room 260	Sink	30.8
16B	Room 260	Sink	3.0

Water sources in excess of 20 ppb. Recommendation is to remove from service immediately. Do not return to service until re-testing confirms mitigation was effective.

**#####** Water source is 5-19.9 ppb, but still displays evidence of lead. Recommendation is to re-test source on an annual basis at a minimum.

"A" = First Draw "B" = Second Draw

### APPENDIX B LABORATORY ANALYSIS

December 27, 2023

Jeff Faust J.S. Held #6 Meadow Heights Professional Park Collinsville, IL 62234 TEL: (618) 343-3590 FAX: (618) 343-3597

**RE:** Wentzville SD Water Sampling 231000104

http://www.teklabinc.com/

WorkOrder: 23121113

Dear Jeff Faust:

TEKLAB, INC received 29 samples on 12/14/2023 8:51:00 AM for the analysis presented in the following report.

Samples are analyzed on an as received basis unless otherwise requested and documented. The sample results contained in this report relate only to the requested analytes of interest as directed on the chain of custody. NELAP accredited fields of testing are indicated by the letters NELAP under the Certification column. Unless otherwise documented within this report, Teklab Inc. analyzes samples utilizing the most current methods in compliance with 40CFR. All tests are performed in the Collinsville, IL laboratory unless otherwise noted in the Case Narrative.

All quality control criteria applicable to the test methods employed for this project have been satisfactorily met and are in accordance with NELAP except where noted. The following report shall not be reproduced, except in full, without the written approval of Teklab, Inc.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Marin J. Darling I

Marvin L. Darling Project Manager (618)344-1004 ex 41 mdarling@teklabinc.com

### **Abbr Definition**

- \* Analytes on report marked with an asterisk are not NELAP accredited
- CCV Continuing calibration verification is a check of a standard to determine the state of calibration of an instrument between recalibration.
- CRQL A Client Requested Quantitation Limit is a reporting limit that varies according to customer request. The CRQL may not be less than the MDL.
- DF Dilution factor is the dilution performed during analysis only and does not take into account any dilutions made during sample preparation. The reported result is final and includes all dilution factors.
- DNI Did not ignite
- DUP Laboratory duplicate is a replicate aliquot prepared under the same laboratory conditions and independently analyzed to obtain a measure of precision.
- ICV Initial calibration verification is a check of a standard to determine the state of calibration of an instrument before sample analysis is initiated.
- IDPH IL Dept. of Public Health
- LCS Laboratory control sample is a sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes and analyzed exactly like a sample to establish intra-laboratory or analyst specific precision and bias or to assess the performance of all or a portion of the measurement system.
- LCSD Laboratory control sample duplicate is a replicate laboratory control sample that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
- MBLK Method blank is a sample of a matrix similar to the batch of associated sample (when available) that is free from the analytes of interest and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedures, and in which no target analytes or interferences should present at concentrations that impact the analytical results for sample analyses.
- MDL "The method detection limit is defined as the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results."
- MS Matrix spike is an aliquot of matrix fortified (spiked) with known quantities of specific analytes that is subjected to the entire analytical procedures in order to determine the effect of the matrix on an approved test method's recovery system. The acceptable recovery range is listed in the QC Package (provided upon request).
- MSD Matrix spike duplicate means a replicate matrix spike that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
- MW Molecular weight
- NC Data is not acceptable for compliance purposes
- ND Not Detected at the Reporting Limit
- NELAP NELAP Accredited
  - PQL Practical quantitation limit means the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operation conditions.
  - RL The reporting limit the lowest level that the data is displayed in the final report. The reporting limit may vary according to customer request or sample dilution. The reporting limit may not be less than the MDL.
  - RPD Relative percent difference is a calculated difference between two recoveries (ie. MS/MSD). The acceptable recovery limit is listed in the QC Package (provided upon request).
  - SPK The spike is a known mass of target analyte added to a blank sample or sub-sample; used to determine recovery deficiency or for other quality control purposes.
  - Surr Surrogates are compounds which are similar to the analytes of interest in chemical composition and behavior in the analytical process, but which are not normally found in environmental samples.
  - TIC Tentatively identified compound: Analytes tentatively identified in the sample by using a library search. Only results not in the calibration standard will be reported as tentatively identified compounds. Results for tentatively identified compounds that are not present in the calibration standard, but are assigned a specific chemical name based upon the library search, are calculated using total peak areas from reconstructed ion chromatograms and a response factor of one. The nearest Internal Standard is used for the calculation. The results of any TICs must be considered estimated, and are flagged with a "T". If the estimated result is above the calibration range it is flagged "ET"
- TNTC Too numerous to count ( > 200 CFU )
